OBJECTIVE

Software Engineer with experience in full-stack web development and VoIP technical support, Search Engine Optimization Skilled in React, Node.js, and MongoDB, with strong troubleshooting and communication abilities. Adept at building scalable applications and providing efficient technical solutions for client and system issues.

WORK EXPERIENCE

Web Developer

(Nov2025-Present)

- Developed, maintained, and optimized the company's full-stack web applications using **MongoDB, Express.js, React.js, and Node.js**. Created a visually appealing and user-friendly landing page.
- Implemented responsive, high-performance front-end components with **React** and modern **JavaScript (ES6+)**.
-  Designed and integrated **RESTful APIs** and managed **server-side logic** using **Express** and **Node.js**. Managed **MongoDB databases**, ensuring efficient data modeling, indexing, and query performance.
- Handled **bug fixing, performance optimization, and deployment** on cloud services .
- Maintained code quality through **Git version control**, code reviews, and unit testing.

Search Engine Optimization

(Jan2024-July2025)

- Developed and implemented **off-page SEO strategies** to increase domain authority and organic visibility.
- Promoted website visibility through **directory submissions, blog commenting, and influencer collaborations**.
Managed and optimized profiles on **high-DA platforms**, forums, and social bookmarking sites.
- Tracked and analyzed **backlink performance metrics** using tools like **Ahrefs, SEMrush, and Moz**.
- Ensured compliance with **Google Webmaster Guidelines** to maintain healthy SEO practices.
- Monitored **competitor backlink strategies** to identify new growth opportunities.

VOIP ENGINEER

(FEB 2025- OCTOBER 2025)

- Installed, configured, and maintained **VoIP servers** (Asterisk, FreePBX, or custom SIP servers) on **Linux environments**.
- Created and managed **VoIP servers** for client and internal use, ensuring stable SIP registration and call routing

- Collaborated with network and NOC teams to optimize **QoS (Quality of Service)** for voice traffic.
 - Ensured **high uptime and call quality** through proactive monitoring and performance tuning
-

EDUCATION

Master of Computer Application

July 2023 - July 2025

- Manav Rachna International Institute of Research and Studies, Faridabad Specialization in Blockchain and Cybersecurity
- CGPA-8

Bachelor of Science

- Saraswati Mahila Mahavidyalya, Palwal
2023
- CGPA-7.

Nov 2020 - May

PROJECTS

ATS Resume Tracking System

- Developed and implemented an AI-powered ATS resume screening system utilizing Langchain and LangGraph, enabling automated evaluation of PDF resumes against multi-level criteria and generating quantifiable ratings to streamline candidate selection processes.
- Built using Python, Langgraph, Langchain.

AI AGENT

- Designed and deployed an AI agent using n8n to handle real-time chat messages.
- Implemented **conversation memory** to maintain context across interactions.
- Automated **real-time logging of responses** into **Google Sheets** for tracking and analysis.

ADDITIONAL INFORMATION

Technical Skills

• Java, Python, HTML, CSS, Java script, ReactJS, Bootstrap, SQL, DSA, Linux, WordPress, HTML5, TailwindCSS, Express.js, Node.js, CSS3, MongoDB

Research Paper

- **A Modified Approach for online Attendance Monitoring Using Facial Biometrics** It was researched done to verify and identify individual through image, audio, video.

LinkedIn Learning

- Programming Foundation - Data Structures, Java - Data Structures.

NPTEL

- Introduction to Industry 4.0 and Industrial Internet of Things, Natural Resource Management.
